

NASA's Deep Impact Mission: Decision Making

Capture the Issue

LISTENING NOTES SHEET EXAMPLE

Main Ideas

Notes

Introduction

All large telescopes built recently are reflector telescopes. Advances in technology have allowed them to be combined with instrumentation such as Charged Couple Device (CCD), which is used to make images that are studied. Astronomers rarely, if ever, use their eyes for direct observation.

Functions of
the telescope

Telescopes gather light.

Telescopes resolve fine detail.

Telescopes magnify the image.
